PROFILE

Emerging backend and full-stack engineer with 5 months of hands-on experience developing web applications and learning scalable development practices. Currently building proficiency in JavaScript/TypeScript, Node.js, and React while gaining exposure to cloud technologies like AWS and containerization with Docker. Demonstrates strong learning aptitude and enthusiasm for backend system development, API integration, and modern web technologies. Eager to contribute to cross-functional teams and continue developing skills in production-grade software development. Available for immediate full-time remote & onsite (Mumbai) opportunities focused on junior developer roles.

EXPERIENCE

Full Stack Developer Intern

June 2025 - October 2025

Perfectlyokay, Mumbai (On-site)

- Frontend Development: Built responsive product interfaces using Next.js and TypeScript, creating reusable custom components for enhanced user experience
- SEO & Performance: Implemented SEO optimization strategies and sitemap generation to improve search visibility and site performance
- Backend Systems: Developed web scrapers and worked extensively with MongoDB aggregations for data processing and analysis
- Web Technologies: Configured session management, cookie handling, and caching mechanisms for improved application performance
- AI Integration: Successfully integrated AI models into existing systems, demonstrating adaptability to emerging technologies
- Quality Assurance: Identified and resolved critical bugs, ensuring stable production deployments

EDUCATION

Smt. Chandibai Himathmal Mansukhani College

2023 - 2026

Bachelor of Information Technology

SKILLS

Languages: JavaScript, TypeScript

Backend: Node.js, Express.js

Frontend: React.js, Next.js

Databases: MongoDB, MySQL

Tools: Git, Canva, Figma

PROJECTS

My Portfolio Website: <https://portfolio-one-lac-74.vercel.app/>

School Management System:

This is a School Management System built using Next.js, TypeScript, and Tailwind CSS. The project focuses on providing a responsive, modern front-end interface for managing various aspects of school operations, such as student records, class schedules, attendance tracking, and announcements.

Key Features:

- Built with Next.js for fast, SEO-friendly performance
- TypeScript for improved code reliability and maintainability
- No backend – data is currently handled statically or through local state (e.g., useState, useEffect, or mock data)

This project serves as a solid front-end foundation that can be extended with a backend API in the future.

E-Commerce Website:

This is a fully functional E-commerce Website built with the MERN stack (MongoDB, Express.js, React.js, Node.js). The platform features a robust backend to handle user authentication, product management, and order processing, along with a responsive and intuitive front-end user interface.

Key Features:

- User Management: Secure user registration and login
- Admin Panel: Dedicated dashboard for managing products and tracking orders.
- Product Management: Add, edit, or remove products easily
- Order Handling: Track order status and manage shipping details
- Fully Responsive: Optimized for all devices (desktop, tablet, mobile)
- Secure Backend: Built with Express and MongoDB to ensure performance and data integrity

This project demonstrates a complete full-stack e-commerce solution with scalability and real-world functionality.
